Project Proposal

"The proposal clearly describes the structure, layout, and theme of the webpage with some details."

My website will have:

1. 1 homepage and at least 3 subpages; the homepage and subpages have a header with a title centered above and horizontal menu below that leads to the other pages.
2. The homepage has picture carousel animation displaying store products (slideshow effect) which autoscrolls and has forward and back buttons.
3. The first subpage will have a scroll box with text and pictures inside. The scroll box will have a scroll bar to allow users to roll it up and down.
4. The second subpage has an unordered HTML list with several product entries.
5. The Last subpage has a "enter the email and subscribe" form submit via post. Which will be submitted to http://web.engr.oregonstate.edu/~zhangluy/tools/class-content/form_tests/check_request.php Links to an external site.
6. There is one button in the footer to download a map to store location.
7. There is a link in footer that you can click and leads to outside webpages (LinkedIn, Yelp, email, etc.)

Theme: Blue with 3D effect (Same style as my website http://www.databasetests.com/loginP.php)
